/note="Organ: EPs' Vector: PXX-Asc; Site 1: EcoR 1;
Site 2: Not 1; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor digested with Not1 and then cloned
directionally into pXx-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AATAATTACG. This library was created for the University
Iowa Brain Anatomy Project (BMAP): "Gene Discovery in the
Developing Mouse Nervous System", supported by National
Institute of Mental Health (NIMH)."
DNA Sequencing by: Dr. M. Bento Soares, University of Iowa Clone Distribution: Distribution information can be found at http://genome.uiowa.edu/distribution/mousef1.html

/ lote="Organ: Head; Vector: pXX-Asc; Site 1: EcoR I;
Site 2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarcos
gel.First strand cDNA synthesis was primed with Oligo-dr
primer containing a Not I site. Double strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with Not! and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is CGAACTGAAT. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

Bento Soares, University of Iowa CDNA Library Arrayed by: Dr. M. Bento Soares, University of Iowa	Clone Distribution: Distribution information can be found at http://genome.uiowa.edu/distribution/mousefl.html This clone was contributed by the Brain Molecular Anatomy Project	Seq primer: pYX-5. FEATURES Location/Qualifiers 1783	/organism="minum" //organism="minum" //ortain="CS7BL/6" //db_xref="minum" //db_xref="minum" //db_xref="minum"	/clone=lnades:301/46/" /tissue_type="whole brain" /dev_stage="1,5, and 15 days newborn" /lab_host=="HilloB (TI phage resistant)" //ab_host=="hilloB (TI phage resistant)"	/orde=Torgan: Brain; Vector: pYX- Asc; Site 1: EcoR I; Site 2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarcse gel.First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with NotI and then cloned directionally into pYX-Asc vector. The library tag

/note="Vector: pExpress-1; Site 1: Not1; Site 2: EcoRV;
/Not cell mass of blastocyst stage embryos and differentiated to an early endodermal cell type. Cell line id and NIH Registry designation is BGOI. Positive for GATA4, MixL1, Msx1, HNF4alpha expression; negative for AFP expression. Passage number 40. cDNA primed using oligo-dT primer: 5'-pGACTAGTCTAGANCGCGAGCGCCCC(7)25-3' and cloned into the EcoRV/Not1 sites of pExpress-1. This primary library is non-normalized (normalized primary library is non-normalized (normalized by Express Genomics (Frederick, MD). Sequence ends have been trimmed to exclude vector and regions below phred quality 16. Three-prime sequences are presented as their reverse complement and have been trimmed to exclude polyA. Note: this is a Mammalian Gene Collection library."

/note="Organ: By9, Vector: pXx.hac; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand CDNA synthesis was primed with oligo-dT
primer containing a Not I site. Double strand CDNA was
size selected according to mRNA size fraction, ligated
with ECOR I adaptor, digested with NotI and then cloned
directionally into pYx.Aso vector. The library tag
sequence located between the Not I site and the polyA tail
is AATAATTACG. This library was created for the University
lows Brain Anatomy Project (BMAP): 'Gene Discovery in the
Developing Mouse Nervous System', supported by National
Institute of Mental Health (NIMH)."

/clone lib="MINH BMAP GIO"
/clone lib="Organ: Brain" Vector: pYX- Asc; Site_1: EcoR I;
Site_2: Not I; The library was constructed according
Bonaldo, Lennon and Soares, Genome Research, 6:791-806,
1996. Denatured RNA was size fractionated on a 1% agarose
gel.First strand cDNA synthesis was primed with oligo-dT
primer containing a Not I site . Doubbe strand cDNA was
size selected according to mRNA size fraction, ligated
with EcoR I adaptor, digested with NotI and then cloned
directionally into pXX-Asc vector. The library tag
sequence located between the Not I site and the polyA tail
is AGCGAGACAG. This library was created for the University
lowa Erain Anatomy Project (BMAP): 'Gene Discovery in the

THIS PAGE BLANK (USPTO)

```
Truncated bone morphogenic protein (BMP) receptors and serine/threonine kinase receptors may be used in compositions to inhibit the effects of BMP·s such as BMP-2 and BMP-4. The truncated receptors pref. comprise the ligand binding domain, but not the serine/threonine kinase and transmembrane domains. The truncated proteins are soluble and will be excreted into supernatant by recombinant mammalian cells expressing them. Such cells can be delivered in a medium or matrix which partially impedes their mobility, thereby localising the cells to a site of bone or cartilage injury. (Updated on 25-MAR-2003 to correct PN field.)

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynucleotides, a method for identifying a compound useful in treating cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating cativity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating compulates its activity is useful for preparing a medicament for treating colypeptides or their antibodies. The polynucleotide or the compound that modulates its activity is useful for preparing a medicament for treating catherapy). The sequence presented is a rat protein (shown in Table 2 of the rerapy). The sequence presented is a rat protein (shown in Table 2 of the sequence data for this patent did not form part of the printed or this patent did not form part of the printed for greening decreases.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                   invention can be used for treating osteopenia, osteoporosis, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described as TGF-beta antagonists and/ or BMP-antagonists. This polypeptide sequence is a bone morphogenetic protein receptor type I given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                       This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (50ST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST and also BEER) and methods for detection thereof Accordingly, such antibodies and osteopathic compositions of the
New antibody or antigen-binding fragment that binds specifically to sclerostin polypeptide and which inhibits binding of sclerostin polypeptide to a bone morphogenic protein, useful for increasing bone mineral content or density.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1 MTQLYTYIRLLGACLFIISHVQGQNLDSMLHGTGMKSDVDQKKPENGVTLAPEDTLPFLK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BEER) and methods for detection thereof.

                                                                                                                                              420
                                                                                                                                                                            480
                                                                                                                                                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibite binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BEER) and methods for detection thereof. Accordingly, such antibodies and osteopathic compositions of the invention can be used for treating osteopenia, osteoporosis, fractures
                                                                                                                                                                                                                                                                                                                                                                                                                                                        receptor; bone morphogenetic protein; bone injury; antibody production; TGF beta antagonist; BMP-antagonist; osteopathic; osteopenias;

This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin cantibody that competitively inhibits binding of the sclerostin cantibody that competitively inhibits binding of the sclerostin compensation or a BMP Type II receptor binding site. The present invention can secribe a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BEER) and methods for detection thereoff. Accordingly, such antibodies and osteopathic compositions of the invention can be used for treating osteopenia, osteoporosis, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described sequence is a bone morphogenetic protein receptor type I given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             120

The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST)

Colypeptide. The SOST polypeptide comprises any of 6 sequences having 190

or 213 amino acids, fully defined in the specification (DAD97341,

Competitively inhibits binding of the SOST polypeptide to a bone

morphogenic protein (BMP) Type I Receptor binding site and a BMP Type II

Receptor binding atte, where the BMP Type I Receptor binding site is

morphogenic protein (BMP) Type I Receptor binding site and a BMP Type II

Receptor binding to a BMP Type I Receptor binding site is

capable of binding to a BMP Type I Receptor binding site is

capable of binding to a BMP Type I Receptor binding site is

capable of binding to a BMP Type I Receptor binding site is

call that is capable of expressing the new antibody; a composition

cult that is capable of expressing the new antibody; a composition

cult that is capable of expressing to antibody; a composition and post site of physiological carrier; an immunogen comprising a peptide comprising 6, 7,

call that is capable of expressing the new antibody that specifically binds to the SOST polypeptide; and methods for identifying an antibody

che SOST polypeptide; methods for producing an antibody that specifically binds to the SOST polypeptide, and methods for identifying an antibody

chat impairs binding of a BMP to the SOST polypeptide, that impairs SOST condimer formation, or that increases bone mineral content. The novel antibody and compositions have osteopathic activity. The SOST nucleic acids may be used in gene therapy. The composition and methods are useful for increasing bone mineralization, which may treat or prevent diseases

cor conditions associated with low bone mineral density, such as

cort conditions associated with low bone mineral density, such as

cort conditions associated with low bone faractures. This sequence represents a

cort conditions associated by the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated antibody specific for a sclerostin polypeptide, useful for increasing bone mineralization or for treating or preventing conditions associated with low bone mineral density, e.g. osteoporosis or

The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST)

CC polypeptide. The SOST polypeptide comprises any of 6 sequences having 190 or 213 amino acids, fully defined in the specification (ADX97341, ADX97360, ADX97389, ADX97400, ADX97402 or ADX97408). The antibody competitively inhibits binding of the SOST polypeptide to a bone competitively inhibits binding of the SOST polypeptide. The antibody competitively inhibits binding of the SOST polypeptide. The invention capable of binding of a BMP Type I Receptor binding site and a BMP Type I Receptor binding site is capable of binding to a BMP Type I Receptor binding site is capable of expressing the new antibody; a composition to a manufactor of comprising the new antibody; a composition to a comprising the new antibody, a composition of a physiological carrier; an immunogen comprising a peptide comprising 6, 7, comprising the new antibody, or its antigen-binding fragment, and a physiological carrier; an immunogen compressing a peptide comprising 6, 7, comprising to the SOST polypeptide; and methods for identifying an antibody that specifically binds to the SOST polypeptide; and methods for identifying an antibody chat modulates a Transforming Growth Factor (TGF)-beta signaling patkway, that impairs binding of a BMP to the SOST polypeptide, that impairs content. The novel conditions associated with low bone mineral density, such as accompania, osteoporosis or bone fractures. This sequence represents a concentry of the invention.

The invention relates to a novel isolated antibody, or its antigen-
binding fragment, which binds specifically to a sclerostin (SOST)

CD polypeptide. The SOST polypeptide comprises any of 6 sequences having 190

or 213 amino acids, fully defined in the specification (ADX97341,

CD CANS97360, ADX97398, ADX97400, AXX97402 or ADX97408). The antibody

CC competitively inhibits binding of the SOST polypeptide to a bone

morphogenic protein (BMP) Type I Receptor binding site is

CC Capable of binding site, where the BMP Type I Receptor binding site is

CC Capable of binding to a BMP Type I Receptor binding site is

CC Capable of binding to a BMP Type I Receptor binding site is

CC Capable of binding to a BMP Type I Receptor binding it and a bone

CC capable of binding to a BMP Type I Receptor polypeptide. The invention

CC capable of binding to a BMP Type I Receptor polypeptide. The invention

CC capable of binding to a BMP Type I Receptor polypeptide comprising 6, 7,

CC capable of binding to a BMP Type I Receptor polypeptide comprising 6, 7,

CC binds to the SOST polypeptide; and methods for identifying an antibody that specifically that impairs binding of a BMP to the SOST polypeptide, that impairs SOST homodimer formation, or that increases bone mineral content. The novel antibody and composition and methods are useful for increasing bone mineralization, which may treat or prevent diseases

CC conditions associated with low bone mineral density, such as a concention or become an or conditions as secondated with become an ineral capable.

CC concentration as a proposed by the composition and methods as a concention or become mineral density, such as a secondated with low bone mineral capable.

CC concentration or because the may be a secondated with low bone mineral capable.

CC concentration or because the may be a secondated with low bone mineral capable.

CC concentration or concentration or conditions are useful concentrations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated antibody specific for a sclerostin polypeptide, useful for increasing bone mineralization or for treating or preventing conditions associated with low bone mineral density, e.g. osteoporosis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              osteopenia, osteoporosis or bone fractures. This sequence represents a rat bone morphogenic protein type I receptor of the invention.

competitively inhibits binding of the SOST polypeptide to a bone morphogenic protein (BMP) Type I Receptor binding site is a Receptor binding site; where the BMP Type I Receptor binding site is capable of binding to a BMP Type I Receptor polypeptide. The invention further comprises: a hybridoma cell producing the new antibody; a host cell that is capable of expressing the new antibody; a composition comprising the new antibody, or its antigen-binding fragment, and a physiological carrier; an immunogen comprising a peptide comprising 6, 7, 8, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acide of the SOST polypeptide; methods for producing an antibody that specifically consider methods for producing an antibody that specifically that modulates a Transforming Growth Factor (TGP)-beta signaling pathway, that impairs binding of a BMP to the SOST polypeptide, that impairs SOST canding of a BMP to the SOST polypeptide, that impairs SOST canding of a BMP to the SOST polypeptide, that impairs SOST canding of a BMP to the SOST polypeptide, that impairs SOST canding an antibody and compositions have osteopathic activity. The SOST nucleic acted may be used in gene therapy. The composition and methods are useful for increasing bone mineralization, which may treat or prevent diseases or conditions associated with low bone mineral density, such as secondarial and processing a receptor of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New bone morphogenetic protein receptor kinase protein - used for identifying cpds. capable of binding it and for developing therapeutic cpds. and detection system(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A cDNA library prepared from NIH3T3 poly-A RNA was screened with J159 fragment to isolate clone BRK-1 (sequence given in AAQ90184) encoding full-length BMP receptor kinase protein (AAR74343). Vectors including DNA were used to express recombinant BRK-1 in CHO and COS-7 hosts. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MTQLYTYIRLLGACLFIISHVQGQNLDSMLHGTGMKSDLDQKKPENGVTLAPEDTLPFLK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The sequence represents mouse bone morphogenetic protein (BMP) receptor type-I kinase-I (BRK-I), which induces cellular differentiation in response to BMP. Complex formation between BRK-I and type-II BRK-3 may be studied by co-expression of both genes, followed by screening with an extidied by co-expression of both genes, followed by screening with an extidied by co-expression of both genes, followed by screening with an extidied by co-expression of both genes, followed by screening with an extidied by co-expression of both genes, followed by screening with an extra present in BRK-1 BRK-1 and both genes, for the transmembrane region, and the Colluster of cysteine residues (cysteine box) within 25-30 amino acids of the transmembrane region, and an upstream cysteine box after the putative signal peptide. The BRK-3 receptor and antibodies against it may be used in diagnostic assays for BMP disorders, or in therapy to bind or scavenge BMPs. In addition, expression of the BRK-3 gene along with a reporter gene under the control of a hormone responsive element in a cell culture may be used to screen compounds for BRK-agonist or -antagonist activity,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                               Full-length mouse bone morphogenetic protein (BMP) type I receptor kinase protein-1 (BRK-1) (AAR95225) is a receptor capable of binding BMP and transducing a signal initiated by the binding. Its amino acid sequence was deduced from a cDNA clone (AAT28021). A BMP receptor kinase protein complex formed of full-length, incomplete or soluble BMP type I receptor kinase protein and full-length, incomplete or soluble BMP type II receptor receptor kinase-3 (BKK-3) (see also AAR95222-24 and AAR95226-34) is useful for screening cpds. for BMP receptor affinity or for determining the concentration of a BMP receptor ligand in a clinical sample. The concentration of a BMP receptor ligand in a clinical sample. The complex can be expressed by host cells co-transfected with vectors carrying the appropriate DNA sequences (see also AAT28018-30)
                                                                                                                                                                                                                                                                                                                                                                                               120
                                                                                                                                                                                                                                                                                                                                                                                                                         120

```
This represents a mouse BMP receptor kinase protein (BRK)-1. This can be used in the method of the invention of determining whether a compound can bind to a bone morphogenetic protein (BMP) receptor kinase protein complex. The method comprises allowing a compound in a sample to bind to the complex, where the complex is comprised of (i) a BMP; (ii) a BRK protein; (iii) an ActRIIB receptor. The method can be used to determine the concentration of a BMP receptor ligand in a sample by comparing the binding to a standard curve prepared with known concentrations of BMP ligand. The method can also be used to determine whether a test compound produces a signal on binding to a BMP receptor protein complex. The method is useful for determining whether a ligand, such as a known or putative drug, can bind to and/or activate the receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Screening method using bone morphogenetic protein receptor complex - which binds to potential drugs, and ActRIIB receptor used in the complex, also host cells transfected with DNA encoding the complex.

APPLICANT: WOZNEY, John
APPLICANT: CELESTE, Anthony J.
APPLICANT: THIES, R. Scott
APPLICANT: TAMAJI, No. 6291206oru
TITLE OF INVENTION: RECEPTOR PROTEINS
INTHER OF SEQUENCES: 19
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genetics Institute Inc.- Le
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ; Sequence 2, Application US/08123934A; Patent No. 6291206
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     : 532 amino acids
amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TOPOLOGY: linear

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2, Age Sequence 14, Age Sequence 14, Age Sequence 11, Sequence 11, Sequence 11, Sequence 11, Sequence 11, Sequence 11, Age Sequence 1
